

What is Evo Finance?

Evo Finance is a BRC-20 TOKEN offering transparency, continuous liquidity and an elasticized supply to the holders with the best rebase formula which creates Auto-Staking and Auto-Compounding tokens.

-We offer Auto-staking Protocol (best profitable protocol) that makes staking facile and offers remuneration to the holders and also aids in stability of returns in crypto.

DID YOU KNOW?

1.Auto-staking and compounding features propose fixed APY of 1000% annually.

3.Our Auto-staking protocol pays you every 24 hrs.

2.Auto staking goes straight to your wallet when Evo token is purchased from us. Tokens need not be moved to our website. It's simple and straight! You are staked from the time you buy and all set to receive rebase rewards. It's the easiest auto-staking in DeFi EVER!

How does Auto-staking work?

1.The Auto-Stake feature is a simple function called Buy-Hold-Earn.

2.Buy-Hold-Earn - Just by buying and holding the token in your wallet, you will earn rebase rewards directly into your wallet. Your tokens will increase every 24 hrs.

3.Buy-Hold-Earn - Just by buying and holding the token in your wallet, you will earn rebase rewards directly into your wallet. Your tokens will increase every 24 hrs.

Ever wondered what a Rebase token is?

1.A Rebase Token is one whose circulating supply expands or contracts due to changes in the token price. This increase or decrease in supply works with a mechanism called rebasing. When a rebase occurs, the supply of the token is increased or decreased algorithmically, based on the current price of each token .

2.Evo takes advantage of a positive rebase formula which increases the token supply allowing the holders to keep growing their tokens,unlike the traditional staking protocol. However our efficient usage of a rebasing token eliminates the need to approve and traditionally stake your tokens.

The positive rebase is backed by an Reserve which is ensured and supported by the token's buy and sell fees.

Diving into Reserve

1. Reserve is a separate wallet. The Reserve uses an algorithm that backs the Rebase Rewards and is supported by a portion of the buy and sell trading fees that accrue in the Reserve wallet

2. Reserve is a separate wallet. The Reserve uses an algorithm that backs the Rebase Rewards and is supported by a portion of the buy and sell trading fees that accrue in the Reserve wallet

3. The Reserve is dedicated to buy backs and burns of tokens when the pair supply is equal to or greater than 2.5% of the total supply.

How can the treasury help?

1.The Treasury plays a vital role in Evo protocol. It provides three extremely critical functions for growth and sustainability.

2.The treasury functions as an additional financial support for the Reserve.This additional support can become important in the event of an extreme price drop of the token. It helps to create a floor value for the token.

3.The treasury is also used to fund new products, services, and projects that will expand and build up the use cases and economy. Additionally, the treasury provides funding for marketing.

Let's understand the word BURN

1. It's an action of removing circulating tokens from a cryptocurrency by "burning" them.

2. The burn is used to support the supply of the project

3. Burning a token means removing it from circulation. This reduces the number of coins in circulation. This mechanism is used to prime a new coin or introduce scarcity, which causes the value of the coin to increase.

4. The program starts with 2 billion tokens reserved exclusively for this purpose and will increase over time. In order not to be a pump and dump program, we will perform the burn operations in a linear.

So, do you know what APY is?

1. APY the abbreviation of Annual Percentage Yield.

This measures the real rate of return on your principal tokens amount by taking into account the effect of compounding interest.

2. Well, in our case, your tokens represent your principal, and the compound interest is added periodically on every Rebase event (Every 24 Hrs). Your new principal amount is your then current token amount, plus your new rebase token amount. This total amount is what gets calculated for your next rebase rewards.

How is APY Backed?

Evo has integrated a solid Reserve structure which takes advantage of the trading volume fees in order to back the staking rewards (rebase rewards) when the pair supply is worth 2.5% of the total supply.

Scenario :

When the daily Reserve gains are greater than or equal to all the Holders' Daily ROI, this means that the Swap Threshold can fill the plus-value generated from the Rebase Rewards.

-> $\text{Reserve} \geq \text{Daily ROI}$

If the daily Reserve gains are lower than the Holders Daily ROI, a portion of the Treasury is added to fill the difference.

-> $\text{Reserve} < \text{Daily ROI}$

$\text{Reserve} + \text{Treasury} \geq \text{Daily ROI}$

The result is a self-equalising system that promotes consistent high returns over time to every token holder.

How APY is Calculated?

The APY is calculated from the reward yield (a.k.a. rebase rate) using the following equation: It raises to the power of 365 because a rebase happens 24 hours. Consider there are 365 days in a year, this would give a rebase frequency of $365 * 1 = 365$.

$$APY = (1 + \text{Reward Yield})^{365}$$

Buy and Sell fees/tax?

1. Buy and sell fees are an important component. They provide capital for performing critical functions to the protocol.

2. The amount of the fees (14% for buys and 18% for sells) allows to provide holders with the stable high yield of 1000% annually.

One additional benefit of the high fees is that Evo is the only token that benefits when Whales dump because the fees collected support holders.

Buy Trading Fees: 5% - Liquidity 5% - Reserve. 4% - Treasury.

Sell Trading Fees: 5% - Liquidity. 5% - Reserve. 8% - Treasury.

Placement:

1. 5% of the trading fees is directed to the Reserve which helps sustain and back the Staking Rewards provided by the Positive Rebase.
2. 5% of the trading fees goes to backing the liquidity of the pair ensuring an ever increasing collateral value.
3. 4% of the buys and 8% of the sales go directly to the treasury which supports the Reserve, provides a marketing budget and funds new project and product development.

Our Future Projects:-

Evo Game:- Evo game is our future project that allows Evo token holders to generate even more rewards. Simple, Powerful and Proven.

.Your Evo Tokens Give You Access to Game.

.Easy to Enter Easy to Place.

.Multiple Big Winners Each Week.

.No One Loses Their Initial Deposit.

.Even if you don't win, keep all of your money!

The instructions and rules will be announced once the Game is live

NFT'S:-

We are going to launch our own premium collection of NFT's with best perks possible. The NFT'S are provided free to Pre-sale holders. The perks will be announced at later stages

Metaverse:- We are going to enter the Metaverse with a massive projects. The team involved in Metaverse projects will be doxxed to public. The details will be provide to Holders according to roadmap

Payment methods :-

We are going to launch our own premium collection of NFT's with best perks possible. The NFT'S are provided free to Pre-sale holders. The perks will be announced at later stages

Investment company :-

we are going to launch investment company. All the details and team related to company will be doxxed to public. The investments will be done based on approval from holders

The 50% Profits which will be earned from all the projects will be given back to community and remaining 50% will be used for future developments of those projects.
